

SOMAYA ADEL ELKHATEEB

Frontend Engineer | React · Next.js · TypeScript | SaaS & Enterprise Applications

+20 120 818 8574 | dev.somayaadelkhateeb@gmail.com | Egypt | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven Frontend Engineer with 3+ years of experience architecting high-performance, configuration-driven SaaS and multi-tenant enterprise applications using React, Next.js, and TypeScript. Proven track record of designing reusable component systems adopted across 10+ product modules, cutting duplicated engineering effort and long-term maintenance cost. Skilled at translating Figma designs into production-ready UI, implementing secure RBAC and authentication systems, and shipping complex, data-heavy dashboards for enterprise and B2B clients. Comfortable owning features end-to-end - from architecture and API integration to polished, accessible interfaces.

PROFESSIONAL EXPERIENCE

Frontend Developer - ComplyMarket ([ComplyMarket.cloud](#)) May 2025 – Present | On-site, Egypt

Enterprise SaaS compliance platform for a German client, covering 20+ specialized modules: Bill of Materials, Reporting, Questionnaire Management, Battery, Packaging, and Trade Compliance.

- Architected a unified questionnaire engine used across 12+ modules - built solo end-to-end, enabling any team member to integrate full questionnaire flows (paginated groups, conditional next-question logic, configurable inputs) without writing module-specific logic from scratch.
- Refactored the Reporting module, eliminating redundant code patterns and aligning it with a consistent data-flow architecture, reducing maintenance overhead across all report types.
- Built GenericRequirementsTable, a single reusable component adopted across 7 AI-powered report types (Chemical, Cosmetics, Packaging, Electrical, etc.), replacing what would have been 7 separate implementations.
- Designed Figma UI for the Compliance Requirements module covering Super Admin and Company-level workflows, bridging design and implementation without a dedicated designer.
- Developed a Reporting Control Dashboard enabling Super Admins to define per-company access limits (by date or usage count) for AI compliance reports - a business-critical control feature.
- Implemented RBAC permission systems across all modules with protected routes and role-aware UI rendering, supporting multiple company tiers and user roles.
- Flagged and resolved business-flow inconsistencies across modules, proposing UX improvements later adopted by the team.

Frontend Developer - Smartivemedia Jan 2024 – Apr 2025 | Remote, Full-time

Multi-tenant e-commerce SaaS platform with a shared merchant dashboard, subdomain storefronts, and a customer-facing website, built within a cross-functional team with shared component ownership.

- Led the Settings module - Branches, Language, Permissions, Email Notifications, and Design System - while contributing shared components used by the entire team across the dashboard.
- Built product management flows for simple, configurable (variant/option-based), and food product types with full multi-language (i18n) support, managing complex state across deeply nested form structures.
- Implemented secure authentication and OTP verification flows, improving session security and user onboarding reliability.
- Worked within a large-scale shared component architecture: React, Redux Toolkit, React Query, MUI, Radix UI, Tailwind CSS, React Hook Form, Zod, Axios, React Router DOM.

KEY PROJECTS

PeopleFlow - Multi-Tenant HR & Workforce Management Platform | Next.js · Node.js · Prisma · PostgreSQL · NextAuth

- Built the platform end-to-end as a solo developer - frontend, backend APIs, database design, and authentication - supporting companies, departments, employees, attendance tracking, and leave management workflows.
- Designed a relational PostgreSQL schema via Prisma ORM covering company structures, employee hierarchies, attendance records, leave policies/balances, and approval workflows.

- ❑ Implemented authentication and authorization using NextAuth, JWT, refresh tokens, protected routes, and role-based access control (RBAC) for Super Admin, Company Admin, Manager, and Employee roles.
- ❑ Built scalable REST APIs using Node.js and Prisma with reusable service layers and business-rule validation.

Rose - E-commerce App & Dashboard | *Next.js · NextAuth.js · TypeScript · RBAC*

- ❑ Built a full-featured e-commerce storefront with product listings, categories, cart, and checkout flows, plus a separate admin dashboard for products, orders, and content with role-based access control.
- ❑ Implemented a complete authentication system using NextAuth.js with protected routes and session management.

Vive Healthy Snacks - Full-Stack E-commerce | *Next.js · Prisma ORM · PostgreSQL*

- ❑ Architected an e-commerce application end-to-end as a solo developer, including responsive custom UI, product management workflows, and relational database schema design.

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React.js, Next.js (App Router), Redux Toolkit, React Query (TanStack Query), Context API

Architecture & Patterns: Micro-Frontend Architecture, Nx Monorepo, Module Federation, configuration-driven component systems, dynamic form engines

Styling & UI: Tailwind CSS, SASS, CSS-in-JS, Material-UI (MUI), Radix UI, Responsive Design, Accessibility

Forms & Validation: React Hook Form, Formik, Zod

APIs & Databases: REST APIs, GraphQL, Axios, Prisma ORM, PostgreSQL

Security & Auth: NextAuth.js, RBAC, Protected Routes, OTP Flows, JWT

Testing & Tools: Jest, React Testing Library, Storybook, Bruno (API Testing), Git, GitHub, Jira, ClickUp, Trello, Figma, Agile/Scrum

Performance: Lazy loading, skeleton states, image optimization, bundle awareness, Core Web Vitals

LANGUAGES

Arabic: Native

English: Professional Working Proficiency

EDUCATION

Bachelor's Degree in Computer & Information Systems (IT Specialization)

Alexandria University - KMA Academy | Graduated 2022
